CAT® REBUILD - AS GOOD AS NEW

Energy Power Systems Australia (EPSA) offers Cat® Rebuild units as a low-cost, quality solution alternative - providing used Cat Power Systems fully rebuilt to Caterpillar® specification.

Caterpillar's Power Systems Rebuild Program offers you a like-new engine with a like-new warranty and a new serial number, all at a fraction of the cost of a comparable new engine. Same Cat quality and reliability with zero hours.

Your machine has been completely rebuilt from the ground up to include all Cat product updates, it has been tested and inspected, and is delivered to you with full Cat warranty - backed up by nation-wide service support.

The Cat Rebuild Program began in 2011 and demand continues to grow.

The Program enables Caterpillar and Cat dealers to reduce scrap metal, take back used core from the market and use remanufacturing salvage technology to extend engine and component life.

As demand for power continues to increase worldwide, this Program offers a low-cost solution to the market, providing an alternative for customers who want to purchase a reliable Cat generator set at a lower entry cost.

PRODUCT SUPPORT

Caterpillar is your guarantee of ongoing dependability, reliability and efficiency, and the Cat Rebuild Program is no exception.

With any Rebuild equipment purchased, EPSA offers the Caterpillar Extended Service Coverage (ESC) insurance plan. ESC protects you against parts and labour costs associated with unplanned repairs. EPSA can tailor an ESC plan to suit your needs.
